# The next generation of assembly tools

The Tensor IxB tool family is ready to be integrated directly into your production system. The tools are fully managed by the integrated controller, without the need for any intermediate controller box.

This reduces the hardware footprint on the line and enables a transformation toward a new, smart, and flexible way of manufacturing.

**x2.5** Faster station installation

**- 50%** Rebalancing time

**+ 30%** Faster tightening

## Easy line adjustments

The Tensor IxB platform is quick to install, easy to rebalance, and simple to maintain. In addition, the integrated controller makes new product introduction faster and line rebalancing easier with complete process control of the station and real-time integration to your production system.

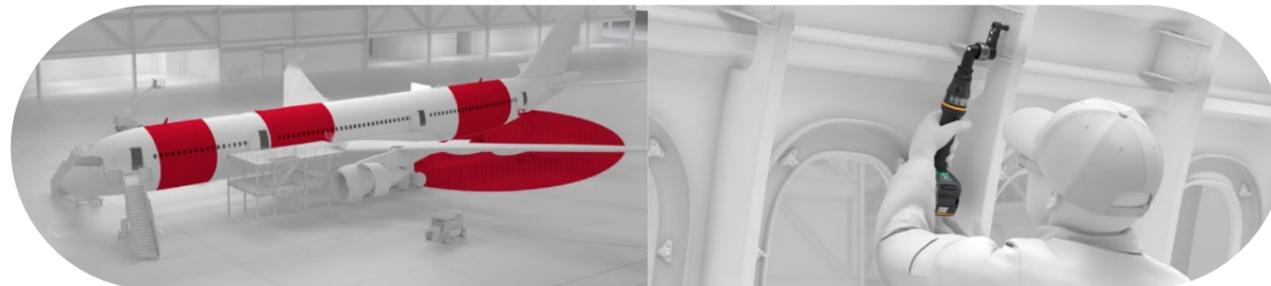

## Ease of use

The Tensor IxB platform is user-friendly and doesn't require extra training to get started. The tools are created to give operators constant visibility of production via an intuitive interface and workstation display. In addition, the systems are designed to enable universal access through web browsers with a familiar interface into other Atlas Copco systems, saving time on training and implementation.

## Continuous production

The Tensor IxB platform improves uptime in challenging connectivity environments. With Tensor IxB tools, continuous production with maintained process control of the workstation is made possible. Furthermore, radio shadows are no longer an issue, as tools can be managed without a wireless connection, preventing unexpected production halts.

## Accessibility & ergonomics

The Tensor IxB platform offers a revolutionary approach to working in applications that carry inherent ergonomic risks. We have spent significant time researching and developing a tool family that makes your operators lives easier and safer on the line.

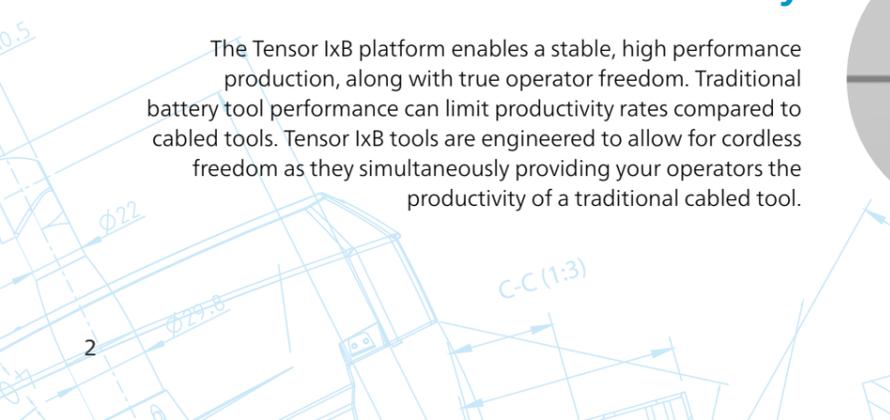

## Productivity

The Tensor IxB platform enables a stable, high performance production, along with true operator freedom. Traditional battery tool performance can limit productivity rates compared to cabled tools. Tensor IxB tools are engineered to allow for cordless freedom as they simultaneously providing your operators the productivity of a traditional cabled tool.

## Quality of the joint

The Tensor IxB platform brings production quality to all-new levels. Serving as the most precise cordless tool family in our product portfolio, the Tensor IxB platform is engineered to drive an increase in production quality, along with improved levels of accuracy and control. The integrated controller software gives access to more in-depth data, designed to help investigate and solve tightening issues easier and faster.

# The Tensor IxB family

## Smart. Connected. Scalable.

The Tensor IxB family are handheld and cordless, designed to be lighter, faster, and smaller than previous generation tools. We provide a wide range of tool models, all with an integrated controller platform and a variety of batteries and accessories. The Tensor IxB family of integrated controller tools consist of two tool models: the Tensor ITB and the Tensor ICB.

### Installation – up to 2.5x faster

### Software update – up to 70x times faster\*

### Continuous production

#### Connectivity strength – at least 2x better signal\*

#### Number of batch sequences in radio shadow

\*\*previous generation of battery tools used with a physical controller box

## Tensor ITB

### Fast and precise tightening

The Tensor ITB, with its wide range of models, is a truly productive cordless nutrunner with a torque range of 1–200 Nm. By integrating the controller intelligence into the tool, the freedom and flexibility is in the hands of the factory operator.

- Up to 30% faster tightening than Tensor STB
- Wide range of models and tool accessories
- Reduce operator influence on the angle of the tightening with TrueAngle, an advanced tightening strategy that utilizes a built-in gyroscope

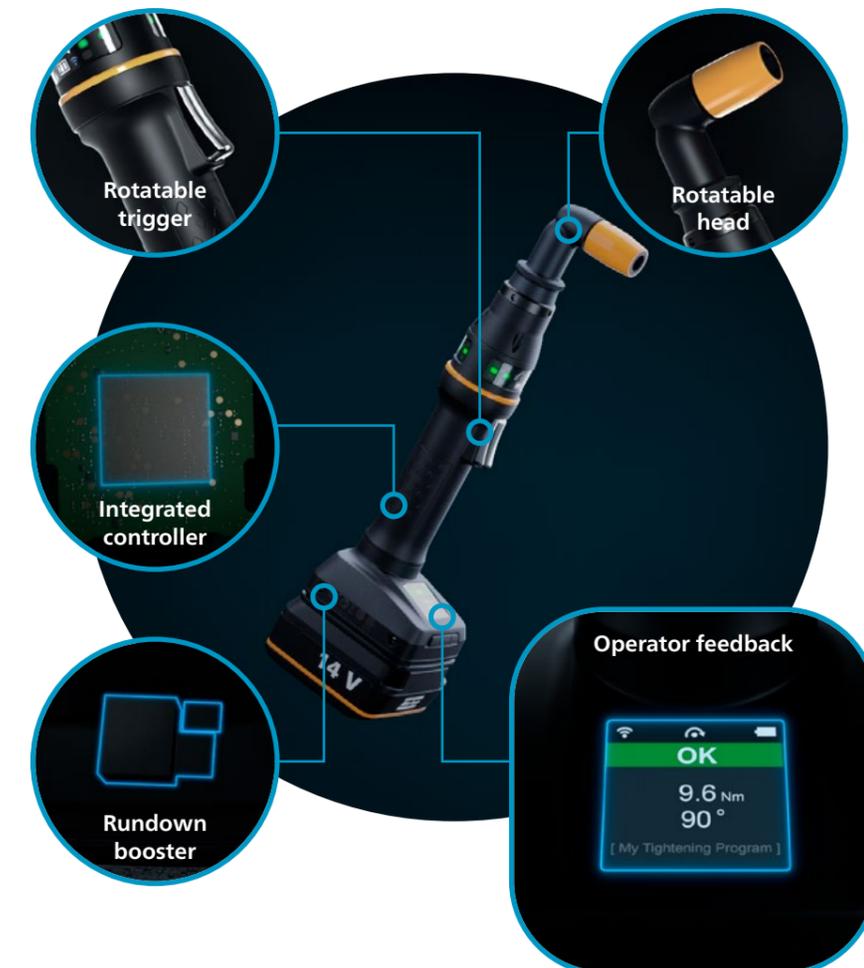

## Tensor ICB

### Accessibility in cramped spaces

The Tensor ICB, a small, ergonomic nutrunner, is specifically designed for space-limited applications. It can be operated with one hand, and both the trigger and the angle head can be adjusted to fit the need of the application and the operator.

- 360° rotatable angle head and trigger
- 30% lighter and 30% shorter than the previous generation of battery tools
- Operator feedback from the integrated eHMI display
- Reduce operator influence on the angle of the tightening with TrueAngle, an advanced tightening strategy that utilizes a built-in gyroscope

### Tightening speed – up to 30% faster\*

### Weight incl. battery – 30% lighter

### Length – 31% shorter

### One hand to operate

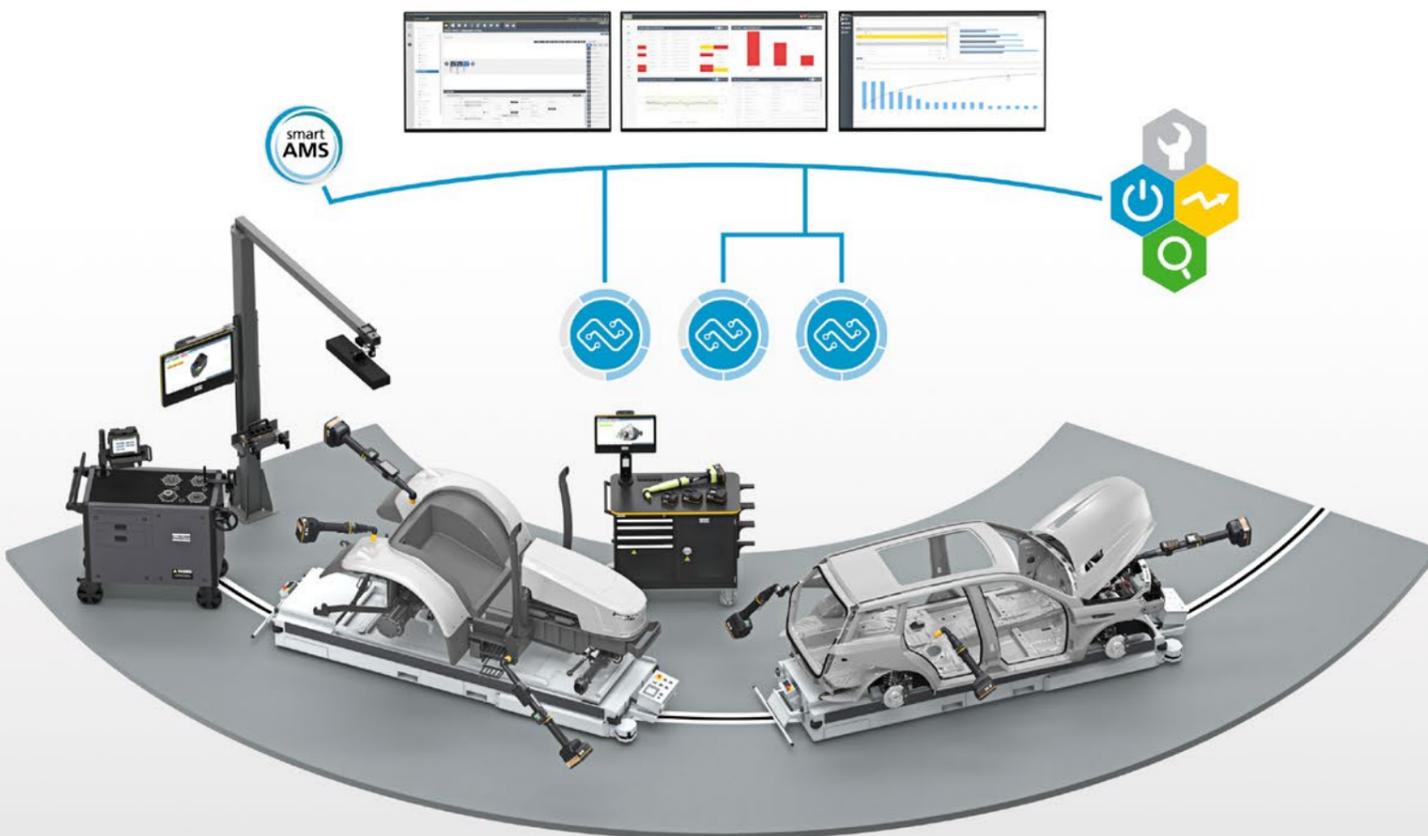

## Easy integration into the Atlas Copco Ecosystem

The Tensor IxB family of tools are the first to be integrated directly into the Atlas Copco Ecosystem without any intermediate controller box. Instead, all tightening processes are managed by the integrated controller. The Tensor IxB tools, together with the Atlas Copco Ecosystem, can bring a significant difference to your plant.

The Tensor IxB platform enables major assembly station improvements and reduces costs associated with assembly tools. With Tensor IxB tools, you can increase productivity, ergonomics, and flexibility – three very important elements to consider in today's manufacturing environment of frequent change.

The Smart Connected Ecosystem offers a wide range of solutions, including visualization equipment, positioning solutions, error-proofing accessories, and bolt positioning software. In addition, the Atlas Copco Ecosystem offers station control and operator guidance solutions through Smart AMS and SQS software solutions, along with a complete service portfolio that supports your plant from start up all the way to repair and optimization.

This is Smart Connected Assembly in reality; it simplifies connections, reduces installations, and supports connectivity, visualization, error proofing, and data – all in one package, linked together.

## Ordering numbers

Below, you will find our selection of Tensor IxB tool models and accessories:

Model	Torque range [Nm]	Speed [r/min]	Length [mm]	Ordering number
<b>ITB-A31</b>				
ITB-A31-05-10	1-5	2972	419.6	8436 0030 05
ITB-A31-10-10	3-12	1270	419.6	8436 0030 10
ITB-A31-15-10	5-15	944	419.6	8436 0030 15
