

Air filter SMC with automatic drainage.

DESCRIPTION

Air filter with automatic drainage. Filters water and cleans compressed air to 5 micron to prevent corrosion and downtime on compressed air tools and other pneumatic components. High air quality can be achieved by separating the condensate through centrifugation. Transparent polycarbonate container with built-in safety guard and 360° visibility. Should be installed before the regulator and mist lubricator. The flow is measured at 6 bar feed pressure pressure and 0.5 bar pressure drop. The drain pipe should have an internal diameter of min. 8 mm and not exceed 5 m in length. Bracket not included, see accessories.
